UPDATE ON MSEC ENTERPRISES WATER TOWER

Work is on schedule to bring this site to full service. The new water site is being constructed to keep up with the growth in Woodforest and maintain water pressure and quality service to all customers.

The site elevation will be graded and a fence constructed during this period to preserve the aesthetics of the community. MSEC engineers have designed a single story control building that is required to operate the new water well that is adjacent to the tower.

Residents will not notice a difference in water pressure or other supply factors once the site is fully up and running. The elevated storage tower will be in service by summer and the full site will be in operation by the end of 2018.
